

Medical Analysis Report

Generated on September 27, 2025 at 09:49 AM

Patient Information

Patient Name:	Aman Shaikh
Analysis Type:	Image Analysis
Analysis Date:	September 27, 2025 at 04:02 AM
Report Generated:	September 27, 2025 at 09:49 AM

Analyzed Image

Visual Observations

- Multiple light brown to tan patches on the skin
- Patches appear to be well-defined and irregularly shaped
- Skin tone is otherwise normal with no signs of inflammation or infection

Possible Conditions

Rank	Condition	Probability	Description
1	Pityriasis versicolor	80%	The presence of multiple light brown to tan patches, particularly on the torso, is consistent with pityriasis versicolor, a common skin condition caused by a yeast infection.

2	Post-inflammatory hypopigmentation	20%	The patches could also represent post-inflammatory hypopigmentation, but the lack of history of inflammation or injury makes this less likely.
---	------------------------------------	-----	--

Recommended Next Steps

1. Schedule an appointment with a dermatologist
2. Avoid self-treatment with over-the-counter medications
