

Medical Analysis Report

Generated on September 26, 2025 at 11:41 AM

Patient Information

Patient Name:	Aman Shaikh
Analysis Type:	Image Analysis
Analysis Date:	September 26, 2025 at 06:09 AM
Report Generated:	September 26, 2025 at 11:41 AM
Confidence Score:	0.7%

Analyzed Image

Visual Observations

- The heel of the foot shows significant peeling of the skin, with large sections of skin flaking off.
- The skin appears dry and cracked, with visible wrinkles.
- The peeling seems to be concentrated on the heel, with less visible peeling on other parts of the foot in the image.

Possible Conditions

Rank	Condition	Probability	Description
1	Dry skin (Xerosis)	70%	The peeling and dryness of the skin are common symptoms of dry skin, especially on the heels.

2	Fungal infection (Tinea pedis)	30%	While the image could suggest a fungal infection due to the peeling, there's no clear indication of redness, itchiness, or other typical symptoms.
---	--------------------------------	-----	--

Severity Assessment

Level: MODERATE

Medical Recommendations

1. Moisturize the affected area regularly with a high-quality moisturizer.
2. Exfoliate gently to remove dead skin cells.
3. Consider over-the-counter antifungal treatments if a fungal infection is suspected.

Warning Signs to Monitor

Seek medical attention if you experience:

- Increased redness or swelling around the affected area.
- Pain or discomfort in the foot.
- Spread of peeling or cracking to other areas of the foot.

Recommended Next Steps

1. Consult a healthcare professional for a definitive diagnosis.
2. Follow up if symptoms worsen or do not improve with self-care.
