Patient Information

Patient Name:	pallavi p
Analysis Type:	Image Analysis
Analysis Date:	February 13, 2026 at 03:18 PM
Report Generated:	February 13, 2026 at 08:49 PM

Analyzed Image

Visual Observations

- The image shows a circular, well-defined skin lesion with a raised border and a lighter center.
- The lesion appears to be approximately 1-2 cm in diameter.
- The skin surrounding the lesion is normal in color and texture.
- The lesion has a scaly appearance, particularly at the edges.

Possible Conditions

Rank	Condition	Probability	Description
1	Ringworm (Tinea corporis)	80%	The circular shape, raised border, and scaly appearance are characteristic of ringworm, a common fungal infection of the skin.

2	Eczema (Atopic dermatitis)	15%	The lesion's appearance could also suggest eczema, but the well-defined circular shape and scaly edges are less typical for eczema.
3	Psoriasis	5%	While psoriasis can present with scaly patches, the circular shape and specific location make it less likely compared to ringworm.

Recommended Next Steps

1. Schedule an appointment with a dermatologist for further evaluation.
2. Consider over-the-counter antifungal treatments if ringworm is suspected.
