## Patient Information

|                   |                               |
|-------------------|-------------------------------|
| Patient Name:     | pallavi p                     |
| Analysis Type:    | Image Analysis                |
| Analysis Date:    | February 13, 2026 at 02:30 PM |
| Report Generated: | February 13, 2026 at 08:01 PM |

## Analyzed Image

## Visual Observations

- The image shows a circular, well-defined skin lesion with a raised border and a lighter center.
- The lesion appears to be approximately 1-2 cm in diameter.
- The skin surrounding the lesion is normal in color and texture.
- The lesion has a scaly appearance, particularly at the edges.

## Possible Conditions

| Rank | Condition                 | Probability | Description                                                                                                                    |
|------|---------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------|
| 1    | Ringworm (Tinea corporis) | 80%         | The circular shape, raised border, and scaly appearance are characteristic of ringworm, a common fungal infection of the skin. |

|   |                            |     |                                                                                                                                       |
|---|----------------------------|-----|---------------------------------------------------------------------------------------------------------------------------------------|
| 2 | Eczema (Atopic dermatitis) | 15% | The lesion's appearance could also suggest eczema, but the well-defined circular shape and raised border are less typical for eczema. |
| 3 | Psoriasis                  | 5%  | While psoriasis can present with scaly patches, the circular shape and distinct border in this image are less common for psoriasis.   |

### Recommended Next Steps

1. Schedule a dermatology appointment
2. Avoid scratching the lesion
